

Build with Gemma — Participant Hacker Guide

This guide covers everything you need: how to access Gemma models, what to submit, how you'll be judged, and key rules to keep in mind.

1. How to Access Gemma Models

You have several options for getting hands-on with Gemma during the event — pick whichever fits your project best:

- **Hugging Face** — download or run Gemma models directly.
- **Kaggle Models** — pull Gemma variants straight into your Kaggle Notebook.
- **Gemini Enterprise Agent Platform** — build agentic workflows using Gemma.
- **Hugging Face / Keras (local or Kaggle Notebook inference)** — download the weights for local or notebook-based inference, including offline/on-device use cases.

2. Submission Requirements (Pass/Fail)

To be eligible for judging, your team must submit **all three** of the following via your Kaggle Writeup:

1. **Live Demo** — a URL or files showing your working demo. This can be:
 - A hosted web app
 - An interactive terminal recording
 - A fully functional Kaggle Notebook
2. **Kaggle Writeup** — a technical report covering:
 - Project architecture
 - How Gemma 4 was used
 - Challenges you overcame
 - Your engineering process
3. **Public Code Repository** — a link to a public repo (GitHub, Kaggle Notebook, etc.). Code must be **well-documented** and clearly show your Gemma 4 implementation.

 Your Kaggle competition environment includes a **default Writeup template** (Settings → Project Writeup) — use it as your starting structure.

3. Judging Criteria (100 Points Total)

Criteria	What Judges Look For	Points
Gemma Integration	Did you effectively utilize Gemma (prompting, RAG, or fine-tuning)? Is Gemma core to your solution?	30
Innovation & Impact	Does your app solve a meaningful problem? Is your approach creative and relevant?	30
Functionality	Does the prototype actually work? Is the demo convincing?	20
Presentation & Writeup	Is your Writeup clear? Does your video clearly explain the problem and solution?	20

Judging note: Make your demo video and writeup clear and compelling, since judges are reviewing many projects quickly.

For a 1-day event, judges are told to weigh **prototype functionality, creative use of Gemma 4, and your pitch** more heavily than production-ready polish — so don't stress about making everything pixel-perfect.

4. Key Rules to Know

- **Read your event's specific Rules tab** — organizers customize deadlines, licensing terms, and local requirements per event, so don't assume rules are identical across hackathons.
 - **Deadlines are strict** — know the exact submission lock time for your event.
 - **Prize funding (if applicable):**
 - Prizes are distributed via **Payoneer**.
 - Winners **under 18** must submit a **signed parental approval form** to claim rewards.
 - You may be asked to fulfill certain winner obligations if selected — e.g., interviews, presenting your work, or providing agent traces for validation. Check your event's Rules tab for specifics.
 - Restricted competitions require an invitation link or an approved email — make sure you're properly registered before the deadline.
-

Quick Checklist Before You Submit

- ☐ Live demo link/files work and are accessible
- ☐ Kaggle Writeup completed (architecture, Gemma usage, challenges, engineering process)
- ☐ Public code repo linked, well-documented, clearly shows Gemma 4 implementation
- ☐ Correct track selected
- ☐ Submitted before the deadline
- ☐ If a minor and prize-eligible: parental approval form ready

Good luck, and have fun building with Gemma! 🚀
